Profile

Computer Science undergraduate at **FAST NUCES** with essential knowledge in Artificial Intelligence, including basic model training. Committed to leveraging strong technical expertise and analytical problem-solving skills.

Major Projects

Emotion Detection from Live Camera Feed (Computer Vision & AI) [Team of 4 members]

- Developed a real-time emotion detection system capable of classifying eight distinct human emotions (e.g., happiness, sadness, anger, surprise) using live camera input.
- Applied computer vision and deep learning (CNN) techniques to preprocess and analyse video frames effectively.
- Evaluated model performance using accuracy metrics, achieving high recognition accuracy on real-time data.
- Implemented using Python, TensorFlow/Keras, OpenCV, and integrated webcam feed for live demonstration.

BERT-Based Sentiment Classifier [Solo project]

Tools: Python, Hugging Face Transformers, PyTorch, Sklearn, Pandas

- Developed a deep learning model using **BERT)** for binary sentiment classification (Positive/Negative).
- Pre-processed 160,000+ tweets using regex cleaning, lemmatization, stop word removal, and TF-IDF for baseline testing.
- Achieved 0.81 on validation data; tested on unseen tweets with high confidence predictions.
- Explored traditional ML models (Logistic Regression, Naive Bayes) for comparison.

Unity Game Development (C# Programming) [Solo project]

- Developed and completed two practical game development projects, showcasing hands-on proficiency.
- Designed and implemented a 3D interactive game **"Ball A Roll"**, featuring core mechanics such as physics interactions, player controls, collision detection, and level progression.

Professional Experience

01/2025 – 02/2025

Intern at GenISolutions

Interned at **GenISolutions**; learned Unity game development, C# sharp. Developed two projects, including a 3D game **"Ball A Roll".**

Courses

Artificial intelligence ***PNY training***

07/2024 – 12/2024
Shahdara

Course covering **Artificial Intelligence**, **Fast API**, **Python Poetry**, **PyTorch**, and **Pandas.**
hands-on experience in model development, **data handling**, and API deployment.

01/2024 – 02/2024 **Web developer** ***Udemy***

Completed a Web Development course on Udemy, covering HTML, CSS, JavaScript, and modern web practices.

Certifications

Microsoft Certification
In Azure AI fundamentals, Computer Vision, NLP and Deep Learning.

Game Jam
Participated in a Game Development Bootcamp competition

Outstanding officer
Received the **Outstanding Officer Award** from SOFTEC — **Pakistan's largest tech event organizer** and a leading **CS** focused society.

Skills

. Languages & Technologies: C/C++, SQL, 16-bit Assembly. Linux Terminal, python, MATLAB and System Calls Communication Artificial Intelligence, Deep learning, Machine learning Poetry software, Jupiter, Fast API, Unity and NLP

Solo Projects

Candy Crush in C++. Wav Files Editor in C++. Solitaire Graphics in C++ (OOP). Linked of Stacks Containing Queues (Data Structures). 24-hr clock (Data Structures). Banking Token Management system on Logic Works. Tetris 8088 Assembly Language. Client-Sarver Cinema Booking Application (C, C++) O5. Colorization project
